Office Action Summary

Art Unit: 2834

Claims 6-9 objected to under 37 CFR 1.75© as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 6-9 not been further treated on the merits.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-5 rejected under 35 U.S.C. 102(a) as being anticipated by Grahn, WO (169) or Europe (454).

Each reference teaches a rotor support (bearing) and a piezoelectric actuator connected to impart a limited rotary motion to the bearing member. Note especially Grahn (figs 25 and 33), Europe (454) (figs 1, 2, 6 and 7) and WO (169) (figs 1 and 3).

It is notes that the subject matter per se of claim 7 is not described no illustrated in the original disclosure. No specific drive circuits are described or illustrated.

Further cited of interest is Suga.
